Amendment to the Abstract of the Specification:

The applicants replace the Abstract with the following:

A method and system for efficiently personalizing computer hardware. Under the present invention, a subscriber will store computer personalization information pertaining to their existing servers and workstations with a provider. As the servers and/or workstations are replaced or upgraded (or upgraded), the personalization information can be transmitted/downloaded from the provider to the new or upgraded (or upgraded) servers. One the new servers are personalized, the personalization information pertaining to the old workstations will be sent/transmitted to the new workstations. This transmitted information will be then used to personalized the new workstations.
